DaVinci Resolve — Color Shortcuts

Quiz Review Sheet

> *Mac shortcuts are listed first. On Windows: Command → Control, Option → Alt.*

Node Tree

Building and managing the node structure is the backbone of every grade.

Key	Function
`Option + S`	Add Serial Node
`Shift + S`	Add Serial Node Before Current
`Option + L`	Add Layer Node
`Option + P`	Add Parallel Node
`Command + C`	Copy Node
`Command + V`	Paste Node
`Delete` / `Backspace`	Delete Selected Node(s)
Click + Drag	Marquee Select (select multiple nodes at once)

Grade Toggles

Ways to compare your grade against the source, or isolate what you're working on.

Key	Function
`Shift + D`	Bypass Grade (preview toggle, non-destructive)
`Command + D`	Disable Selected Node
`Option + D`	Disable All Nodes
`Shift + H`	Highlight (Solo) Node On/Off

Versions

Non-destructive alternates of a grade, stacked on the same clip.

Key	Function
`Command + Y`	New Version
`Command + B`	Previous Version
`Command + N`	Next Version

Key	Function
Double-click under thumbnail	Show Version Number (in timeline)

Playback & Navigation

Moving through the timeline and reviewing stills.

Key	Function
`Command + W`	Play/Disable Selected Still
`Down Arrow`	Next Clip
`Up Arrow`	Previous Clip
`Right Arrow`	Move Forward One Frame
`Left Arrow`	Move Backward One Frame
`Home`	Timeline Start
`End`	Timeline End
`I`	Set Inpoint
`O`	Set Outpoint
`Option + X`	Clear In/Out

Tracking & Applying Grades

Carrying a window or a look from one place to another.

Key	Function
`Command + T`	Track Forward
`Option + T`	Track Reverse
Middle-click on a still	Apply grade from still to current clip
Middle-click on a timeline thumbnail	Apply grade from one clip to another

Mouse Techniques

Not keyboard shortcuts, but grouped in with them.

Action	Function
Middle-click + drag on video	Drag video window around
Scroll wheel	Zoom in/out of video

System

Key	Function
`Command + Z`	Undo
`Command + Shift + Z`	Redo
`Command + S`	Save
`Command + F`	Fullscreen

Bonus (Not Quiz Material): Printer Lights

A numeric-keypad alternative to the panel/wheels for global offset adjustments — named after old-school photochemical film-printing terminology.

Enable: `Option + Command + ` ` (tilde key)

Adjustment	Increase	Decrease
Exposure	`+` (number pad)	`Enter` (number pad)
Red	`7`	`4`
Green	`8`	`5`
Blue	`9`	`6`
Cyan	`1`	`-`
Magenta	`2`	`0`
Yellow	`3`	`.`

Tips for the Quiz

> **Tip: Serial vs. Parallel vs. Layer**
>
> Serial nodes run one after another — each sees the result of the one before it. Parallel nodes all grade the same original image independently, then combine. Layer nodes composite like layers in Photoshop. If a question asks which node type lets you grade two effects independently before combining them, that's Parallel or Layer, not Serial.

> **Tip: Disable vs. Bypass — know the difference**
>
> Bypass Grade (Shift+D) is a quick global on/off for the whole grade on a clip. Disable (Command+D for one node, Option+D for all) turns off specific nodes in the tree while leaving the rest active. Bypass is coarse; Disable is surgical.

> **Tip: Versions stack, they don't overwrite**
>
> Command+Y always creates a new version rather than replacing the current one — you can cycle back through every version you've made on a clip with Command+B / Command+N. Nothing is lost by trying an alternate look.
